AgForce Training

MEAT & LIVESTOCK AUSTRALIA

Queensland's First Farm Machinery Simulation Training

AgForce Training, in partnership with Meat & Livestock Australia, is bringing cutting-edge simulation training to Queensland with our high-fidelity Tenstar Simulation unit - a global leader in virtual training.

Why Simulation Training For Farm Machinery?

Traditional machinery training can be costly, risky and difficult to access. Simulation training offers a smarter and safer way to build workers' confidence and skills.

- **No fuel consumption**
- **No damage to expensive machinery**
- **No loss of machine productivity**
- **No safety risk**

TENSTAR simulation

One Simulator.
Many Machines & Vehicles.

Real-World Training, Not a Game.

The Simulation Unit replicates real machinery operating situations on-farm.

Workers can be coached on pre-start checks, shutdown procedures and realistic everyday tasks. Designed with farmers and agricultural operators in mind, the Tenstar Simulator offers training across a range of machines, including tractors, combine harvesters and front-end loaders.

"Bringing cutting-edge training technology to farms has always been AgForce Training's goal.

"We've been careful not to 'gamify' dangerous farm work and machinery. Thorough testing has shown the Tenstar Simulation is certainly more than that - it's a $120k super realistic simulator akin to the technology successfully used in aviation for many years.
